answers

Biomes of the world

Which biome is the UK mainly part of?

temperate forest tundra grassland

Sort the information that describes the UK biome correctly.

- four distinct seasons
- mild temperatures, no extremes
- moderate rainfall all year round
- a variety of plants and animals live here
- usual tree type deciduous (broadleaf)

Underline the examples of ecosystems in the UK.

marsh lake climate fens pond biome

Some of the below characteristics of biomes ARE found in the UK biome and some are NOT.

four seasons	usual tree type evergreen	usual tree type deciduous	a variety of plants and animals live here
moderate rainfall all year round	mild temperatures, no extremes	few animals – most found here are nocturnal	wet and dry seasons
