

Investigation sheet

Falling objects

fair test

comparative test

I want to find out if heavier objects fall more quickly than lighter objects.

Question: If we drop a heavier object, will it fall more quickly than a lighter object?

Prediction

things to keep the same
Control variables

one thing we will change
Independent variable

what we will measure
Dependent variable

Results:

Weight of object (number of coins or marbles)	Time taken to drop		
	test 1	test 2	test 3

Conclusion:
